

A Bill to Expand American Research on mRNA Technology to Protect Against Current and Future Infectious and Autoimmune Disease

SECTION 1. The federal government shall increase the funding of research on mRNA technology to protect against autoimmune and infectious diseases.

SECTION 2. A. “mRNA technology” shall be defined as biotechnology that uses synthetic messenger RNA to stimulate or regulate immune responses within the human body, to prevent or treat disease.

B. “Autoimmune disease” is defined as a condition where the body’s own immune system attacks its cells. This includes but is not limited to type 1 diabetes, rheumatoid arthritis, multiple sclerosis (MS), and inflammatory bowel disease (IBD)

C. “Infectious disease” shall be defined as an illness caused by pathogens, including viruses, bacteria, and fungi which enter the human body and cause infection.

SECTION 3. The Department of Health and Human Services (HHS) and the National Institutes of Health (NIH) shall enforce and oversee this legislation.

A. The NIH will be responsible for distributing funding toward research grants and partnerships with universities and private research companies.

B. The federal government shall allocate \$5 billion annually, beginning in fiscal year 2026, and continuing for five years.

SECTION 4. All laws in conflict with this legislation are hereby declared null and void.

Respectfully submitted,

Roshan Shah
